Scalar Waves

What the "scalar weapon" record in the Disclosure Project archive actually contains, where each claim came from, what the word "scalar wave" can mean in physics, and which of its meanings do something.

draft 0.1 · 2 October 2026 · sources: 81 documents from the Disclosure Project Intelligence Archive (DPIA), read in full · Osika Innovation AB · Alexander Osika, Claude

What this paper is. The archive holds a coherent body of material on "scalar waves": Tom Bearden's 1984 booklet filed in CIA records, a CIA analyst memo answering a request for a summary, the trip report of a DIA meeting series on "scalar waves and zero-point energy", a Honeywell–MIT vector-potential programme presented to DARPA, Bearden's later letters, Russian witness files, the microwave-harassment and psychotronics literature, and a set of Tesla weapon claims. This paper reads it whole. It owns three things in the network: the provenance of the scalar-weapon story, the physics of what a "scalar wave" can be, and the ledger of events and capabilities attributed to it. Everything about our own framework's scalar stays in [The Scalar Field](#); everything about energy devices stays in [Zero-Point Energy §9](#). Grading follows the network's rules: never set a claim aside because it sounds strange; find the real thing each claim points at; reserve *contradicted* for a claim a record, or a measurement on its own terms, has answered.

Tags: [MEASURED](#) · [DOCUMENTED](#) · [DERIVED](#) · [ESTIMATE](#) · [TESTIMONY](#) · [COMPATIBLE](#) · [OPEN](#) · [PRE-REG](#) · [NOT SUPPORTED](#) · [CONTRADICTED](#). DERIVED here includes identities of electrodynamics, which are the strongest grade the paper uses.

The short answer. US intelligence collected the scalar-weapon story and asked about it; it did not confirm it. The one official analysis in the archive, a CONFIDENTIAL/NOFORN memo from the late 1980s, writes the scalar wave as a potential with no electric or magnetic field, notes it carries no power, and concludes that its existence is not proven. The document the archive labels "CIA, Bohm–

Aharonov effect, scalar waves, Soviet weapons" is Bearden's own 1984 booklet, held in the CIA's Stargate files.

"Scalar wave" has four meanings in physics. A pure-potential wave is a change of description, not a thing: it carries no energy, exerts no force and cannot be detected, and two of them cannot make energy where they cross. The Aharonov–Bohm effect is real and measured, but it acts only on the phase of charges whose path encloses magnetic flux. Real longitudinal waves exist and are everywhere: sound, plasma waves, near fields. Our own framework's scalar is a global constraint that cannot be aimed.

Of 26 events attributed to scalar weapons, most have an ordinary documented cause. Three remain open on the record, among them the expanding cloud off Japan on 9 April 1984, which a 1985 *Science* paper could not explain. The real programmes behind the psychotronics literature (the microwave auditory effect, non-lethal weapons research, MKULTRA, the Moscow embassy signal) are documented. Each claimed covert use fails on range and power.

PART I · THE RECORD

1 · What the archive holds, and what each document is

Archive labels are not always accurate. Three of the most-cited files are not what their titles say.

DPIA file (label)	What it actually is	Register
117914 "CIA The Boehm Aharonov effect Scaler Waves Soviet Weapons"	Tom Bearden's own booklet, <i>Star Wars Now! The Bohm–Aharonov Effect, Scalar Interferometry, and Soviet Weaponization</i> (24 April 1984), privately funded. Every page carries a CIA release stamp (CIA-RDP96-00788R001900680014-4, approved for release 2003), the series of the CIA's remote-viewing files. No CIA cover sheet, comment or classification.	that the CIA filed it DOCUMENTED ; its claims are Bearden's TESTIMONY

117910 "CIA-Scalar Waves"	A three-page CONFIDENTIAL/NOFORN memo from office DT-ACO answering a verbal request for a summary statement on scalar waves (late 1980s; released 2001, CIA-RDP96-00792R000500240001-6). It names Bearden and his "Fer-de-Lance" briefing as the chief proponent.	DOCUMENTED ; the only official analysis in the set
120536 Hercules memo	A Hercules Inc. (Magna, Utah) trip report on the 6th DIA meeting on "scalar waves / zero-point energy", December 1989, in a series running from February 1988. DIA wanted the area classified; an intelligence R&D council called it "up and coming".	meetings DOCUMENTED ; content is claims
125233, 125245, 125276 Gelinass / HMIT	The Honeywell–MIT vector-potential programme presented to DARPA on 20 May 1982; patents US 4,429,280, 4,432,098, 4,447,779 on signalling with a "curl-free vector potential" read by Josephson devices. Their own slides say remote, unlinked detection "must be established". No result reported.	DOCUMENTED serious physics, no positive
125200 "Anomalous Cloud Phenomenon"	Bearden & Sanchez's submission to <i>Science</i> , 28 Feb 1985, the main source of the list of events attributed to scalar weapons.	TESTIMONY
119944 "Scalar Wars"	A layman's primer by Bill Morgan (2001–02) on Bearden's material; the fullest list of weapon claims.	tertiary
115505 Zohuri speech	A recent slide deck (2023 or later): scalar waves at 1.5 c, over-unity of ~ 3 , healing, Havana syndrome as a scalar attack. Its energy-at-a-distance slides follow Bearden 1984 closely without credit.	TESTIMONY
124476, 124485, 124488	Russian "Peace in Space" witness files (c. 2020): Kaznacheyev's "field life forms", a mind-altering satellite, Gen. Ivashov alleging US climate and "lithospheric" weapons. None uses the word "scalar".	TESTIMONY
117911, 116079 and others	The microwave-harassment and psychotronics literature (§4).	mixed

1.1 The chain

Every scalar-weapon claim in the archive traces to one source or repeats it.

Figure 1. Transmission of the scalar-weapon claims in the archive. Green boxes are official records; they record interest and questions, not findings. The Russian thread runs in parallel and mirrors Bearden's story with the sides reversed: in it, the United States holds the weapons.

1.2 What the official record concludes

DOCUMENTED The DT-ACO memo (117910) is the only analysis an intelligence office wrote. It writes the scalar wave as a potential S with $A = \nabla S$ and $E = B = 0$, notes that the Poynting theorem then gives no power flow, asks where the energy would come from, and closes: existence not proven; energy source unclear; if real, new possibilities for propagation and ranging. It makes no finding about Soviet weapons. The DIA meeting series (120536) recorded claims — a 700 W-in, 3,000 W-out tube, the Krasnoyarsk radar as a "scalar transmitter", A-fields slowing beta decay by 6% — with no measurements. **CONTRADICTED** The Krasnoyarsk claim is answered by the record: in October 1989 the Soviet government acknowledged the installation was an early-warning radar that violated the ABM Treaty. **NOT SUPPORTED** A curl-free potential can be removed locally by a gauge choice, so it cannot change a decay rate.

PART II · THE PHYSICS

2 · Four things "scalar wave" can mean

2.1 A wave of pure potential: a change of description

Electrodynamics writes the fields through potentials: $\mathbf{E} = -\nabla\varphi - \partial\mathbf{A}/\partial t$ and $\mathbf{B} = \nabla \times \mathbf{A}$. Change the potentials by any function S , $\mathbf{A} \rightarrow \mathbf{A} + \nabla S$ and $\varphi \rightarrow \varphi - \partial S/\partial t$, and the

fields do not change at all. The memo's scalar wave is exactly this: a potential with $E = B = 0$ and $\mathbf{A} = \nabla S$.

Result. **DERIVED** (identity) A pure-potential wave is a gauge transformation. It carries no energy (energy density $\epsilon_0 E^2/2 + B^2/2\mu_0 = 0$), no momentum, and exerts no force on any charge. In a region without enclosed flux it does not even shift a quantum phase. No instrument can detect it, because there is nothing physical to detect. Our framework keeps this: its electromagnetic connection is a gauge connection ([Magnetism §2](#)), so pure-gauge configurations are redundant there too.

CONTRADICTED **"Scalar interferometry."** Bearden's central claim is that two beams cross at a distance, their fields cancel, and the "stored" energy appears there as heat or force. Vacuum electrodynamics is linear, so the fields add, and energy goes as the square of the sum: where two fields cancel, the energy density is zero, not doubled. Every interferometer's dark fringe measures this. Two pure-potential beams add to a pure-potential beam: zero plus zero is zero. Bearden's detector, a 4 T magnet said to "curve spacetime", has an equivalent mass density of $7 \times 10^{-11} \text{ kg/m}^3$ **DERIVED**; whatever it reads is ordinary electromagnetic pickup. His "instantaneous potential" is the Coulomb-gauge scalar potential, which is instantaneous because it is a constraint, not a signal ([The Scalar Field §5](#) makes the same point for our own scalar).

2.2 The Aharonov–Bohm effect: the real kernel

MEASURED Potentials do act where the fields vanish, on the *phase* of a coherent charge whose path encloses magnetic flux. The phase is $2\pi \Phi/\Phi_0$ with $\Phi_0 = h/e = 4.14 \times 10^{-15} \text{ Wb}$ (Jaklevic et al. 1965 in superconducting rings; Tonomura 1986 with electrons). It is a phase, not a force: experiments find no force on the passing charge. In our framework the field is the holonomy of the connection around a closed loop, and the Aharonov–Bohm phase and the vector-potential line integral are one statement ([Magnetism §5](#)). Bearden states the effect correctly and then drops the condition that makes it work.

NOT SUPPORTED **Remote, unlinked detection.** The Honeywell–MIT programme asked the right question: can a detector that does *not* encircle the source's flux read its vector potential? For a static source, gauge invariance forbids it. For a varying source,

$E = -\partial \mathbf{A} / \partial t$ outside a toroid is an ordinary induction field, read by ordinary pickup. The archive reports the hardware and no result, and we know of no published positive.

2.3 Real longitudinal waves: everywhere

MEASURED Longitudinal waves exist and do work. Sound is one, and it is the Replicator's muscle (The Two Carriers). Plasmas carry longitudinal electric (Langmuir) waves; antennas have longitudinal near fields; waveguides carry TM modes with an axial electric field. The one patent in the archive that delivers on "longitudinal power transmission" is Bellocq's US 1,941,593 (1934), which pumps liquid with compression waves. These are candidate referents of the lore's "longitudinal waves that pass through matter": real, measurable, and none of them a field-free potential.

2.4 Our framework's scalar: a constraint

The Scalar Field owns this. In the derived gravity law $F = 1 + E/E \star$ the scalar is the global normalization $E \star$, a constraint shared by everything rather than a travelling disturbance ([The Scalar Field §2–§5](#)). It cannot be aimed at a target, so it is not a weapon or a transmitter in any reading the network has. Its open question is cosmological (τ_{global}).

Implementation consequence • Of the four meanings, the two that do something (Aharonov–Bohm phase; longitudinal waves in matter) are already in the network's toolkit. The two the weapon story relies on (pure-potential beams; energy from cancelled fields) carry nothing. Energy claims attached to scalar devices fall under the passivity ruling of [Zero-Point Energy §8](#): static extraction is excluded, driven claims stay open with the input named.

PART III · THE CLAIMS

3 · Events attributed to scalar weapons

The archive attributes 26 events to scalar weapons, mostly via Bearden & Sanchez 1985 (125200) and Morgan's primer (119944). The events are real; the attribution is the claim. The table gives the documented cause where one exists.

Event	Documented explanation	Grade of the scalar attribution
USS <i>Thresher</i> loss, 1963	engine-room flooding (Navy court of inquiry)	NOT SUPPORTED
"Woodpecker" signal, 1976–89	the Soviet Duga over-the-horizon radar, ~10 Hz pulse rate; identity documented (Cold Molding §9.2); Possony's own 1984 article in the archive says so	NOT SUPPORTED as a weapon
Krasnoyarsk installation	ABM-violating early-warning radar, acknowledged by the USSR in 1989	CONTRADICTED
Kyshtym (Urals) 1957	explosion of a radioactive-waste tank at Mayak	NOT SUPPORTED
Vela flash, 1979	a Navy laboratory concluded it was a nuclear test; Bearden's own references include that report	NOT SUPPORTED
San Diego power outage, 1985	Navy chaff shorting power lines, per Bearden's own sources	CONTRADICTED by the source cited
Arrow Air Gander crash, 1985	ice on the wings (majority finding; contested minority report)	NOT SUPPORTED
Tangshan 1976, Tabas 1978 earthquakes	tectonic earthquakes; an energy source for them is out of reach of any transmitter	NOT SUPPORTED
New York blackout, 1977	lightning strikes on transmission lines and cascading failure	NOT SUPPORTED
"Expanding spheres of light" sightings	consistent with rocket and missile plumes lit at altitude; one date (18 June 1982) coincides with a large Soviet launch exercise	NOT SUPPORTED
Moscow embassy microwaves, 1953–76	real signal, up to $\sim 18 \mu\text{W}/\text{cm}^2$ (Project Pandora studied it)	signal DOCUMENTED ; "scalar twin beams" NOT SUPPORTED

Expanding cloud off Japan, 9 April 1984	seen by several airline crews. Walker, McCreery & Oliveira (<i>Science</i> , 1985) tested and rejected the Kaitoku submarine-volcano explanation (winds blew away from the site; the cloud rose ~7 km/min) and concluded "an unknown natural phenomenon or a man-made atmospheric explosion"; hydrophones recorded small underwater explosions hours before	cause OPEN ; Bearden's "cold explosion" mechanism CONTRADICTED (cancelled fields hold no energy)
Bennett Island plumes; 1963 water mound off Puerto Rico	no documented explanation found in the archive	OPEN

The full 26-row table is in `~/Documents/dpia-archive/scalar/notes/S2_bearden_patents_tesla.md`. Bearden himself called the evidence for 9 April "still inconclusive". The cloud deserves its own look; the mechanism attached to it does not.

4 • Psychotronics, microwaves and the real programmes

The psychotronics literature in the archive follows one pattern. It cites a real effect or programme, attaches reported symptoms, and concludes covert use. The real parts are well documented. The covert-use step fails on range and power.

Real effect or programme	What it can do	Claimed extension
Microwave auditory (Frey) effect; the 1973 Walter Reed demonstration of spoken words	clicks or crude speech from pulsed microwaves, by thermoelastic expansion in the head MEASURED . Threshold: tens of $\mu\text{J}/\text{cm}^2$ per pulse, which needs megawatts of peak power at 10 m even with a directional antenna ESTIMATE	"voices" at a distance, thought implantation: NOT SUPPORTED
Non-lethal weapons research (Los Alamos, Army, the 1993 and 1996 conferences)	real programmes DOCUMENTED ; the 1996 programme in the archive contains no psychotronics	covert population control: NOT SUPPORTED

MKULTRA (Gottlieb Senate testimony, 1977); Delgado's radio-linked brain implants; ARPA EEG work	drug and hypnosis experiments; implanted electrodes stimulate the brain DOCUMENTED	remote control without implants: NOT SUPPORTED
Smirnov's "psycho-correction" demonstrations briefed to US officials (1993)	that it was offered DOCUMENTED	that it works: NOT SUPPORTED
HAARP, an HF ionospheric heater	~5 GW effective radiated power gives ~0.04 W/m ² at 100 km DERIVED	weather, earthquakes, minds: NOT SUPPORTED
Duga ("Woodpecker")	at 7,000 km, $\sim 2 \times 10^{-4} \mu\text{W}/\text{cm}^2$, about 10^5 times weaker than the Moscow embassy signal ESTIMATE	mood control in North America: NOT SUPPORTED
Brain's own magnetic field (magnetoencephalography)	~100 fT at the scalp, far smaller at 1 m MEASURED	"remote neural monitoring" of a 0.5 mW brain emission: CONTRADICTED

The archive's microwave-harassment paper (117911; J. McKinney, Association of National Security Alumni, 1992–93) cites the real research accurately and rests its conclusion on 12–25 complainants' accounts, with no field measurement. The people's experiences are recorded as **TESTIMONY**; that grade rates the evidence for a device, not the people. The word "scalar" appears in only two of the nineteen files in this group, and neither defines it.

5 • Tesla

Claim in the archive	What Tesla published or patented	Grade
A scalar "death ray" / howitzer	his 1934 "beam of force" is a charged-particle beam, described in press and in a 1937 offer; never patented or built	that he proposed a particle beam DOCUMENTED ; scalar reading NOT SUPPORTED
Earthquake machine ("telegeodynamics")	a 1935 press interview; nearest patent is the 1894 mechanical oscillator	TESTIMONY

Anti-gravity flying machine	1928 patents describe a turbine-driven vertical-take-off aircraft	CONTRADICTED by the patent
Tesla refused a Nobel Prize	a 1915 rumour; the prize went to the Braggs	CONTRADICTED
The US hid his weapon papers	the FBI's 1981–83 file (116638): the Defense research office asked for the papers with "no idea" what they held; the FBI relayed that they went to Belgrade through his nephew	Belgrade DOCUMENTED ; hidden cache NOT SUPPORTED
Lorentz removed free-energy physics at Morgan's direction	Morgan's 1901 Wardencllyffe funding is documented; a gauge choice changes no observable	NOT SUPPORTED

The Tesla paper ([Nikola Tesla §5](#)) treats his announced gravity theory as a shared hunch, not a borrowed result. Nothing here changes that.

6 • The Russian thread

TESTIMONY The Russian material runs from Kaznacheyev's Novosibirsk work through a 1999 émigré account of KGB-funded psychotronics to the c. 2020 witness files. Kozyrev's 1968 "time" experiments (125339, a JPRS translation) report vibrating-gyroscope weight changes of $\sim 3.5 \times 10^{-5}$; the 1989–90 spinning-rotor weighings that came closest were null, though none reproduced his vibration stage (graded in the intake note: **NOT SUPPORTED** as operationalized, vibration stage **OPEN**). The Soviet torsion programme and its condemnation by the Academy are in The Hidden Map.

PART IV • WHAT THE NETWORK TAKES

7 • Referents, tests, and the open threads

The both-true rule asks for the real thing each lore element points at. The intake note lists five, and four are already in the Replicator stack:

- "curl-free vector potential" from toroids → toroidal and contrawound windings (ruling R5);
- "time-reversed scalar waves" → time-reversal mirrors and optical phase conjugation (The Dissolve);
- "scalar interferometry, effect only at the crossing" → crossed acoustic beams, where nonlinearity generates new frequencies at the crossing (The Phonons);
- "longitudinal waves pass through matter" → sound;
- "microwave weapons" (measured core: the thermoelastic auditory effect) → sound generated *inside* a part by induction (EMAT) or pulsed light. This one is new: a contact-free delivery route for the Replicator's soften rung, proposed as an amendment to R15-b in the intake note.

PRE-REG (sketch, in the intake note) Two cheap tests would answer the corpus on its own terms: **S1**, remote vector-potential detection outside a closed shield around a driven toroid; and **S2**, the Meyl-class claims (1.5 c time of flight, passage through a closed Faraday cage, ×3 output) with frozen pass thresholds.

OPEN The record leaves four threads open: the 9 April 1984 cloud; the Bennett Island plumes; the 1963 water mound off Puerto Rico; Kozyrev's vibration stage. None needs a scalar wave to be worth investigating.

8 • Ledger

Item	Grade	Basis
US intelligence collected and asked about scalar weapons	DOCUMENTED	§1
US intelligence confirmed scalar weapons	NOT SUPPORTED ; the one analysis says "not proven"	§1.2
Pure-potential waves carry energy or force	DERIVED : they do not (identity)	§2.1
Energy appears where cancelled beams cross	CONTRADICTED	§2.1
Aharonov–Bohm phase (enclosed flux)	MEASURED	§2.2
Remote, unlinked vector-potential detection	NOT SUPPORTED ; excluded for static sources	§2.2

Longitudinal waves in matter	MEASURED	§2.3
Krasnoyarsk as a scalar transmitter	CONTRADICTED	§1.2, §3
Most events attributed to scalar weapons	NOT SUPPORTED; ordinary causes on record	§3
9 April 1984 cloud	cause OPEN	§3
Real programmes behind psychotronics	DOCUMENTED	§4
Covert remote mind control or monitoring	NOT SUPPORTED / remote monitoring CONTRADICTED	§4
Tesla weapon papers hidden by the US	NOT SUPPORTED	§5
EM-to-sound inside the part as a Replicator delivery route	ESTIMATE to be run	§7

A • Sources

DPIA items are in the login-gated archive at dpiarchive.com, cited by document number; local copies and four reading notes (S1 official/Russian, S2 Bearden/patents/Tesla, S4 weapons/psychotronics, plus the intake note) are kept outside the repository at ~/Documents/dpia-archive/scalar/. Facts drawn from general knowledge rather than the archive are flagged in those notes for checking: the Krasnoyarsk acknowledgement, the Caprez et al. 2007 test showing no Aharonov–Bohm force, the Vela and Thresher findings, and the HAARP and Duga parameters.
